Subject: confirmation and small change -

I have found the cited results on the attached table - they are confirmed to be elevated for Manganese (669 ug/L sampled by Cabot at the outside spigot on 5/27/10) and for Sodium (132,000 ug/L sampled by DEP at the well) with one small change - the table cites the highest Sodium as 131,000. The actual highest from my quick review is 132,000. Rich will need to mod the PDF, I would expect.
